SUMMARY

Software Engineer with 2+ years building production full-stack and GenAI systems; currently designing a horizontally scaled LLM pipeline for medical-device regulatory submissions. Strongest in TypeScript, Go and distributed backends.

EXPERIENCE

Software Engineer (SDE-1), R&D May 2026 - Present
Meril (Nuvo AI Pvt. Ltd.), IIT Kanpur Technopark *Kanpur, UP*

- Building **Stanley AI**, a GenAI platform on **custom fine-tuned models** that generates audit-ready dossiers and GSPR coverage for medical-device submissions (EU MDR, US FDA, CDSCO).
- Designed the **asynchronous LLM generation pipeline**: the API enqueues ∼40 s jobs and returns a job ID in ∼**12 ms**, absorbing bursts of **1,000 concurrent** requests without holding request threads open.
- Streamed progress over **Server-Sent Events**; hardened model calls with **exponential backoff, jitter and idempotency keys** so retries never create duplicate generations.
- Auto-scaled AWS workers on **queue depth**, holding **p99 flat** under spikes; **MongoDB + Redis** data layer.

Software Engineer May 2024 - May 2026
Laitkor Consultancy Services Pvt. Ltd. & Laitkor Labs *Lucknow, UP*

- Shipped full-stack client apps in **React.js, Next.js, Node.js and TypeScript**, from API to deployment.
- Delivered a **two-sided marketplace** connecting yacht owners directly with fuel suppliers, cutting out brokers.
- Automated client workflows with **PHP, n8n, Power Automate, SharePoint and Power Apps**, including a **two-way Jira ↔ Trello webhook sync** (status, comments, attachments, board moves) with backfill.

PROJECTS

Ritam – Multi-Agent Coding Orchestrator (Go, SQLite). Coordinates **Claude Code and Codex** agents on one task via each CLI's own login, with no stored API keys. A **code-enforced authority model** and state machine route every message, rejecting unauthorized decisions and spoofed identities; **66 Go test files**. (GitHub)

Wyldra – Real-Time Multiplayer Server (Go, WebSockets, TypeScript). Authoritative Go server simulating a persistent 1280×1280 co-op world at **5 ticks/s**, streaming the map as **64×64 RLE-compressed chunks**. **Ed25519-signed** join tickets are verified offline, keeping cross-service calls off the connect path. Migrated from Node.js to Go with a world-parity checker; **23 Go test suites** plus end-to-end protocol tests. (GitHub)

Agentic RAG Assistant (Node.js, Gemini, ChromaDB, Docker). Gemini answers over the top-7 **ChromaDB** chunks; a **self-reflection loop** rewrites weak queries, capped at 2 rounds to bound latency and cost. (GitHub)

SKILLS

Languages	TypeScript, JavaScript, Go, Python, C++, SQL
Backend & Systems	Node.js, Express.js, REST APIs, WebSockets, SSE, Job Queues, JWT, OAuth
Databases	MongoDB, Redis, MySQL, SQLite, Mongoose, Prisma, Firebase
AI & LLM	Fine-tuned Models, RAG, Multi-Agent Orchestration, Embeddings, ChromaDB
Frontend	Next.js, React.js, Redux, Zustand, Tailwind CSS, Vite
Tools & Cloud	AWS, Docker, Git & GitHub, Postman, n8n, Power Automate, Claude Code, Codex

EDUCATION

Master of Computer Applications, Pondicherry University | 9.2/10 CGPA 2022 - 2024
Bachelor of Computer Applications, University of Lucknow | 77.3% 2019 - 2022

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified Generative AI Professional (Credential Url)
- Oracle Cloud Infrastructure Certified AI Foundations Associate (Credential Url)
- Integrate Machine Learning APIs on Google Cloud Platform (Credential Url)
